TEXTILE CARE

BED LINENS | BATH TOWELS | TABLE LINENS | KITCHEN LINENS

- New items should be washed before use.
- Always wash white goods on their own.
- Do not use chlorine bleach, even on white goods
- To avoid shrinkage, do not dry products at high temperatures.
- Wash loads should be organised according to their level of soiling. Heavy staining should be pre-treated.
- All polyester tablecloths should be washed separately from 100% cotton and polycotton blends.
- For 100% polyester items that are heavily soiled, wash temperatures can be increased to a maximum of 60° c but will require a gradual cool down.
- Do not use fabric softeners.
- Cotton products should be ironed slightly damp for best results
- Washing in hard water may give a harsh feel to your towels.
- Fabric conditioner can be used to improve the aroma and softness of your towels but use only small amounts as softener can lubricate fibres, reducing absorbency and can lead to fibre loss.
- Do not over dry towels in the tumble dryer.
- If you see a stray pulled loop on your towel/robe please cut off with a pair of scissors, this will not damage the item.
- Some hair dye and other beauty therapy chemicals contain Benzyl Peroxide which can cause some. colours to be destroyed resulting in a discoloured towel.
